We offer a complete range of metal roofing products, consisting of several different panel profiles, vented or solid soffit, and customizable trim. All of this is available in over 25 painted colors, varying gauges, as well as other material types, including real Copper and Core-Ten™.

Since we fabricate such a wide selection of products, we can fulfill the requirements for most jobs, as well as our uniquely efficient schedule allows for a standard turnaround time of 2-3 days! Additionally, we stock all corresponding fasteners and accessories to complete the order. Accessories include, but are not limited to, profiled and universal foam closure, underlayment, pipe flashers, venting material, etcetera. In the event that we do not have the product that is required for the job, we will do our best to locate it. For questions or ordering, contact us today!

Weathering Steel makes a statement of refined beauty and longevity that no other type of roofing can make. Both Core-Ten™ and Cold Roll are top choices for architectural interest. They can be used as your entire roofing material, as an accent roof, or as an interior focal point.

Metal Roofing is durable, fire-resistant, recyclable, and possesses a high percentage of post-consumer recycled content.

***Please Note: Core-Ten™ and Cold Roll are sold before the "rust regeneration" process has begun.*

CORE-TEN™ & COLD ROLL STEEL

Both Core Ten™ (A606) and Cold Roll are high strength, 22 gauge, bare (untreated) weathering steel products. After installation and exposure to the weather, the metal surface naturally oxidizes and creates an iron oxide matte finish.

Although both products are identical in appearance, Core-Ten™ has additional metal alloys added into its composition that Cold Roll does not contain. They are Copper (Cu), Nickel (Ni), and Chromium (Cr). Combined, these alloys produce an insoluble compound that clogs the pores at the rust/steel interface, consequently slowing the rust regeneration process giving it a longer lifespan. Core-Ten™ is ideal for use in harsh, wet climates.

PERFORMANCE

The dry environment of the intermountain west allows both Core-Ten™ and Cold Roll to last for countless years. Cold Roll can last up to 40 years. Core-Ten™ can last up to 80 years, which is 2-3 times longer than either composition or wood shingles.

***Please Note: Neither Core-Ten™ or Cold Roll carry a warranty. Lifespan is dependent on weather conditions.*

PRODUCTS

Core-Ten™ and Cold Roll can be manufactured into these roofing and siding products.

- 7/8" Corrugated Panel
- 7.2" Box Rib Panel
- 1½" & 2" Mechanical Lock Standing Seam

USES

- Whole Roof Application
- Accent Roofs
- Gable Endwalls
- Wainscot
- Siding

INTERIOR DESIGN

These architectural products make beautiful design focal points that can add uniqueness to any project.

- Custom Kitchen Hood
- Pre-Rusted and Sealed Countertops
- Textured Ceilings
- Kitchen or Bathroom Backsplash
- Radius Wall Panel

SUSTAINABLE

Metal roofing is always 100% recyclable and is initially composed of high amounts of post-consumer recycled content.
