We offer a complete range of metal roofing products, consisting of several different panel profiles, vented or solid soffit, and customizable trim. All of this is available in over 25 painted colors, varying gauges, as well as other material types, including real Copper and Core-Ten™.

Since we fabricate such a wide selection of products, we can fulfill the requirements for most jobs, as well as our uniquely efficient schedule allows for a standard turnaround time of 2-3 days! Additionally, we stock all corresponding fasteners and accessories to complete the order. Accessories include, but are not limited to, profiled and universal foam closure, underlayment, pipe flashers, venting material, etcetera. In the event that we do not have the product that is required for the job, we will do our best to locate it. For questions or ordering, contact us today!

Flatiron Steel is dedicated to providing its customers with the most architecturally pleasing and unique profiles available on the market.

Both corrugated panels provide an architectural beauty combined with strength that make these panels very unique. These panels can be used for residential, commercial, agricultural, or as an interior design element. Set yourself apart and make a lasting decision with corrugated steel.

Metal roofing is durable, fire-resistant, 100% recyclable, energy efficient, and aesthetically appealing. Corrugated panels are available in more than 25 colors, Core-Ten™, Cold Roll, Solid Copper, Rezibond™, and Galvalume.

7/8" CORRUGATED & 7.2" BOX RIB

Beautiful and strong, these panels are structurally sound and impact resistant. Flatiron Steel's distinctive anti-siphon groove, located on the underlap leg, works in conjunction with the 5° over bend on the overlap leg, to create a water tight roofing system.

PERFORMANCE

Corrugated metal roofing by design possesses the most impressive characteristics that metal has to offer. The constant corrugation gives the panels incredible impact resistance and tensile strength. Also, since the corrugated is manufactured in a heavy gauge material, it carries a very high snow load along with high wind ratings. Additionally, the painted finishes carry a 35 year limited warranty. Core-Ten™ and Cold Roll can last up to 80 years in the dry environment of the intermountain west.

****Please Note:** Neither Core-Ten™ or Cold Roll carry a warranty. Lifespan is dependent on weather conditions.

VALUE

The quality painted products with a premium finish, require no maintenance and provides a minimum lifespan of 35 years. This premium paint is "Ultra Cool" and offers many energy saving and environmental benefits, which will be advantageous for many years to follow. Homeowners have even reported saving up to 20% on their year round energy bills. Also, this heavy gauge material has the ability to withstand most storms with its high impact resistance (Class 4) and capacity to endure high winds (Class 90).

MATERIAL OPTIONS

- Kynar® / Hylar® (painted).....22/24/26 Gauge
- Rezibond™.....24 Gauge
- Western Rustic® (painted).....24 Gauge
- Core-Ten™/ Cold Roll.....22 Gauge
