1½" Nail Strip Available Widths: 14.6", 18.6"

1" FLUSH PANEL

1" Flush Panel Available Widths: 12", 16", 20"

We offer a complete range of metal roofing products, consisting of several different panel profiles, vented or solid soffit, and customizable trim. All of this is available in over 25 painted colors, varying gauges, as well as other material types, including real Copper and Core-Ten™.

Since we fabricate such a wide selection of products, we can fulfill the requirements for most jobs, as well as our uniquely efficient schedule allows for a standard turnaround time of 2-3 days! Additionally, we stock all corresponding fasteners and accessories to complete the order. Accessories include, but are not limited to, profiled and universal foam closure, underlayment, pipe flashers, venting material, etcetera. In the event that we do not have the product that is required for the job, we will do our best to locate it. For questions or ordering, contact us today!

Standing Seam metal roofing features differentiate it from other roofing types. It is the lowest maintenance, highest performing, and most environmentally conscious decision homeowners can make when choosing their type of roofing material. Standing Seam metal roofing is durable, fire-resistant, 100% recyclable, energy efficient, and aesthetically pleasing. It is available in over 30 Colors, in various gauges, Solid Copper, Galvalume, Cold Roll, and Core Ten™

STANDING SEAM

These panels are engineered for installation on roofs with a pitch as low as a ½ :12 , depending on profile. The panels snap together with clips and fasteners hidden in a raised seam. The clip or nail strip has a moveable aspect, which allows the panel to “float” with the expansion and contraction of the metal due to temperature changes. Then the specially designed trim locks into the panels keeping all fasteners concealed. This creates a water tight roofing system that will last through the years.

PERFORMANCE

The Standing Seam metal panels, that Flatiron Steel produces, support a UL-Class 90 wind uplift rating. This is the highest mark given by the Underwriters Laboratories and can pass the Dade County Florida wind uplift test, withstanding winds over 140mph.

WHY COOL?

Cool metal roofing can achieve a solar reflectance of over 70%. Reflected solar energy allows the roof surface to remain cooler by reducing heat transfer both into and out of the house. Homeowners have reported saving up to 20% on their year round energy bills.

VALUE

Standing Seam metal roofing is available in Kynar 500®/Hylar 5000® paint, a premium finish that requires no maintenance and provides a minimum life of 35 years. This paint is “Ultra Cool” and offers energy savings and many environmental benefits.

SUSTAINABLE

Metal roofing is 100% recyclable, and initially composed of up to 70% recycled material.
